

Project Name: Solar System Design
 Variant Reference: System Variant

19/03/2012

Location:	SAINT MAWGAN RAF
Climate Data Record:	SAINT MAWGAN RAF (1981-2000)
PV Output:	3.68 kWp
Gross/Active PV Surface Area:	26.03 / 26.12 m ²

PV Array Irradiation:	31,494 kWh
Energy Produced by PV Array (AC):	3,681.7 kWh
Grid Feed-in:	3,681.7 kWh

System Efficiency:	11.6 %
Performance Ratio:	82.7 %
Inverter Efficiency:	94.0 %
PV Array Efficiency:	12.4 %
Specific Annual Yield:	996.7 kWh/kWp
CO2 Emissions Avoided:	3,250 kg/a

The results are determined by a mathematical model calculation. The actual yields of the photovoltaic system can deviate from these values due to fluctuations in the weather, the efficiency of modules and inverters, and other factors. The System Diagram above does not represent and cannot replace a full technical drawing of the solar system.
